

Polish Journals in the World Scientific Corpus: Bibliometric Analysis

Irina Marshakova-Shaikevich*

May 28, 2008

Abstract

The attempt was made to assess Polish scientific journals from different fields of science by Normalized Impact Factor K . The place of Polish scientific journals in the world ranking list is presented. Special attention is paid to the fields of knowledge with considerable Polish contribution.

1 Introduction and Method

The aim of this paper is to assess Polish scientific journals by a special measure—Normalized Impact Factor (K). The idea of normalized impact factor (K) for evaluation of journals was to compare the traditional impact factor (I_p) of a journal, as indicated in *Journal Citation Reports* (JCR), with the average impact factor of the corresponding field of knowledge (I_g). To evaluate a particular journal the traditional impact factor I_p should be compared to the standard impact factor of the corresponding field I_g .

The technique of calculation of the standard impact factor for a field (I_g) is an inherent part of a method, which allows a cross-field evaluation of scientific journals.

For each field five journals with the highest I_p values were selected. If the total number of papers in those journals (for the two preceding years) was less than 500, the list was extended until the threshold of 500 was reached. The ratio of the total number of current year citations (in ISI source journals) of articles in the list journals

(for two preceding years) to the total number of source items in the list journals (in the same two years) represents the group standard impact factor of the field:

$$I_g = \frac{\sum R}{\sum S} \quad (1)$$

The most obvious and simple indicator would be the ratio of the two measures to get the Normalized impact factor of journal:

$$K = (I_p / I_g) \cdot 100\%.$$

If a journal belongs to two or more fields the arithmetic mean of the two or more I_g 's may be used (Marshakova-Shaikevich, 1996 or 2007).

This procedure was applied to the database of *Journal Citation Reports: Science Edition* for 1998–2002.

2 Results

The database JCR: 2002 *Science Edition* contains 5876 journals, including 43 journals published in Poland. The number of Polish journals, indexed in *Science* database, is growing steadily: it reached 54 in 2007. (There are no Polish journals in *Social Sciences* database, only 3 Polish journals are indexed for *Arts and Humanities* database). All those journals are listed in Table 1 in alphabetical order, the value of K for each journal is followed by the value of I_g of the field, in which this journal is indexed. The same journals are ranked by values of K in Table 2, their rank in worldwide list is also given.

3 Discussion

Only one journal (ACTA ASTRONOMICA) has K exceeding 50, the next fifteen journals have K , lying between 15 and 50 (two journals, CONTROL AND CYBERNETICS and ANNALS OF AGRICULTURAL AND ENVIRONMENTAL MEDICINE are being indexed in two fields of knowledge). The rest of the journals show gradually declining K s without any sharp breaks.

There are three traditional fields of knowledge, where Polish contribution to world sci-

ence is significant. Those are mathematics (code PQ) with three journals in JCR 2002: ACTA ARITHMETICA, FUNDAMENTA MATHEMATICAE, STUDIA MATHEMATICA; zoology (code ZM) with three journals: ACTA THERIOLOGICA, ACTA CHIROPTEROLOGICA, ANNALES ZOOLOGICI; and plant sciences (code DE) with three journals: ACTA BIOLOGICA CRACOVIENSIA SERIES BOTANICA, ACTA PHYSIOLOGIAE PLANTARUM, ACTA SOCIETATIS BOTANICORUM POLONIAE.

Distributions of Polish journals in the world journal corpora is shown below:

Zone	Normalized impact K	Number of journals	Number of Polish journals
1	$K > 200$	24	0
2	$200 > K > 100$	173	0
3	$100 > K > 70$	315	0
4	$70 > K > 50$	533	1
5	$50 > K > 20$	2067	9
6	$20 > K > 10$	1407	12
7	$10 > K > 1$	1211	21
8	$1 > K > 0$	62	0
9	$K = 0$	84	0

It is interesting to analyze the dynamics of Polish journals, reflected in K values (see Table 3). Polish journals ranked by average normalized K is shown in Table 4.

The K values (shown in Table 3) seem rather stable. There are few peaks (e. g. ACTA ASTRONOMICA in 2000, ACTA PALAENTOLOGICA POLONICA in 2001), few cases of significant growth (e. g. POLIMERY, CONTROL AND CYBERNETICS) and only one case of a marked decline (BULLETIN OF THE VETER-

INARY INSTITUTE IN PULAWY).

As has been already mentioned the list of Polish journals, indexed for JCR, is gradually expanding. In 1999 CONTROL AND CYBERNETICS was added, in 2000 three more journals followed the suit: REPORTS ON MATHEMATICAL PHYSICS, JOURNAL OF ANIMAL AND FEED SCIENCES (both close to traditional 'Polish' fields of mathematics and zoology) and ARCHIVES OF METALLURGY. Two more journals were added in 2001: FIBRES & TEXTILES IN EASTERN EUROPE and NUKLEONIKA; 2002 witnessed six new journals, two of them belonging to zoology: ANNALES ZOOLOGICI and ACTA CHIROPTEROLOGICA. On the other hand the traditional field of botany, with its low values of K , saw no additions.
